📍 London / Southampton

EDUCATION

University of Southampton

MEng Computer Science | Predicted First | A*A*A at A-Level

Southampton, UK

Expected 2028

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, SQL, HTML/CSS

Frameworks: Next.js, React, React Native, Node.js, GDScript

DevOps & Tools: Docker, Git, Payload CMS, Vercel, Supabase, PostgreSQL, MongoDB, Linux/Bash, Google Cloud Platform (GCP)

Spoken Languages: English (Native), French (B2), Russian (B2), German (B1)

EXPERIENCE

Electronics and Computer Science Society (ECSS)

March 2026 – Present

Web Officer - Website Link

Southampton, UK

- Maintain the official website for over 1,000 members of the UK's largest electronics and computer science society.
- Rebuilt the society's full web platform, supporting our events, elections, sponsors, and merch. I manage deployment using Docker and Nginx and a CMS (Payload) with a MongoDB backend.

University of Southampton

Jan 2026 – Present

Research Assistant

Southampton, UK

- Collected data mapping nighttime urban environments, integrating quantitative sensor data with qualitative metrics.
- Used hardware (luxmeters, GPS, spectrometers) to capture spatial light/color data, correlating it with user experience.

Southampton University Students' Union

June 2025 – Present

School President (Electronics & Computer Science)

Southampton, UK

- Elected representative for 2,800 students; chaired the committee and liaised directly with senior faculty for curriculum improvements.
- Architected structural changes to the voting system, successfully fixing past under-representation issues.

Shell AI

July 2023

AI Insight Programme

London, UK

- Participated in an intensive, week-long AI programme, analyzing ML models for real-time drilling optimization.
- Co-designed and prototyped a social justice mobile application, pitching the UI/UX architecture to senior Experience Design leads.

PROJECTS

CashCat | Next.js, React, PostgreSQL, Vercel, RESTful APIs

cashcat.app

- Developed a full-stack financial application implementing zero-based budgeting principles with complex state management.
- Deployed to the web, the Google Play and Apple App Store, managing payments through Lemon Squeezy / Stripe.

Climate Stories Library | Next.js, Supabase, Vercel, Google Cloud Platform & APIs

climatestorieslibrary.com

- Designed a professional website and video backend for a climate organisation, increasing monthly engagement by 1300% and connecting them with 40+ international clients.

The Political Playground | React, Custom Simulation Engine

polplay.indigo.spot

- Developed a complex election simulation engine featuring coalition mathematics and dynamic voter bloc logic.

Fantasteroids | Godot, Steamworks API, GDScript

Fantasteroids on Steam

- Managed the full development lifecycle of a retro-arcade game, achieving a successful Steam marketplace launch with 300+ players and 90% positive ratings.

ESA AstroPi Challenge | Python, OpenCV, NumPy

- Wrote an image-processing algorithm deployed on the International Space Station to calculate cloud cover from orbit, processing 200+ images daily.
