📍 London / Southampton

EDUCATION

University of Southampton

BSc Computer Science | Predicted First

Southampton, UK

Expected 2027

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, SQL, HTML/CSS

Frameworks: Next.js, React, React Native, Node.js, GDScript

DevOps & Tools: Docker, Git, Payload CMS, Vercel, Supabase, PostgreSQL, MongoDB, Linux/Bash, Google Cloud Platform (GCP)

Spoken Languages: French (B2), Russian (B2), German (B1)

EXPERIENCE

Netcraft

Jun 2026 – Sep 2026

Software Engineering Intern

London, UK

- Developed an AI-powered global search feature, unifying multiple legacy search tools across all engineering teams.
- Delivered end-to-end customer-facing features to a Next.js dashboard, working directly with senior design leads and product owners while actively incorporating client feedback.

Electronics and Computer Science Society (ECSS)

Mar 2026 – Present

Web Officer - Website Link

Southampton, UK

- Maintaining the official website for over 1,000 members of the UK's largest electronics and computer science society.
- Managing deployment with Docker, Nginx and Payload CMS after rebuilding the society's full MongoDB web platform for events, elections, sponsors, and merch.

University of Southampton

Jan 2026 – Jun 2026

Research Assistant

Southampton, UK

- Mapped nighttime urban environments by integrating quantitative sensor data with qualitative metrics, using hardware (luxmeters, GPS, spectrometers) to capture spatial light/color data, correlating it with user experience.

Southampton University Students' Union

Jun 2025 – Jun 2026

School President (Electronics & Computer Science)

Southampton, UK

- Elected representative for 2,800 students; chaired the committee and liaised with senior faculty on curriculum improvements; received the Best Consultation award.
- Architected structural changes to the voting system, fixing past under-representation issues.

PROJECTS

CashCat | Next.js, React, PostgreSQL, Vercel, RESTful APIs

cashcat.app

- Developed a full-stack financial application, processing 3500+ transactions and 1500+ merchants into interactive charts.
- Deployed to the web, Google Play, and the Apple App Store; manage payments through Lemon Squeezy / Stripe.

Climate Stories Library | Next.js, Supabase, Vercel, Google Cloud Platform & APIs

climatestorieslibrary.com

- Designed a professional website and Supabase video backend for a climate organisation, increasing monthly engagement by 1300% and connecting them with 40+ international clients; integrated a headless CMS for client-side management.

The Political Playground | React, Custom Simulation Engine

polplay.indigo.spot

- Developed a complex election simulation engine simulating 10,000+ voter agents, coalition mathematics, and dynamic bloc logic.

Fantasteroids | Godot, Steamworks API, GDScript

Fantasteroids on Steam

- Managed the full development lifecycle of a retro-arcade game; launched on Steam with 300+ players and 90% positive ratings.

ESA AstroPi Challenge | Python, OpenCV, NumPy

- Deployed an image-processing algorithm to the International Space Station to calculate cloud cover from orbit, processing 200+ images daily.
